

# Connect to OASIS

## Our Alternative Supply Irrigation System

OASIS was designed to recycle water for irrigation and help save valuable drinking water for drinking! Best of all – there is no upfront cost to connect for single family residences!

### THE OASIS PROGRAM IS SAFE FOR YOU AND YOUR LOVED ONES.

Using reuse water (OASIS water) for lawn irrigation has conserved nearly 24 billion gallons of drinking water for the City since 1989. OASIS water is tested daily to meet local, state and national regulatory standards – and the water can't leave the treatment facility until it meets those water quality standards. It is safe for people, children, pets and gardens for outdoor and irrigation use. Our high-quality OASIS water can be safely used on edible plants!

### REUSE WATER IS USED ACROSS THE CITY'S SERVICE AREA.

OASIS water is used every day across the cities of Pompano Beach and Lighthouse Point. Currently, over 1,000 single family properties have connected to the OASIS system. The reuse water is distributed throughout the City in purple pipes that are separate from our drinking water system and supply home landscapes, golf courses, schools, and public parks. Reuse water keeps these community spaces healthy and beautiful while reducing saltwater intrusion and saving our drinking water for drinking!

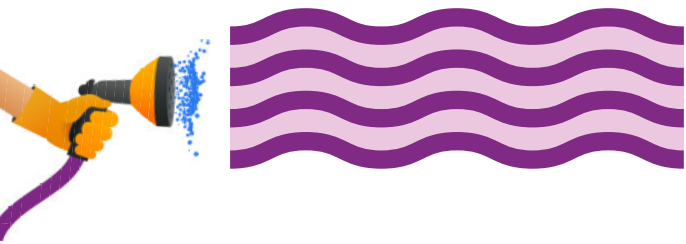

### WHAT IS "REUSE" WATER?

Reuse water is treated water from the Broward County North Regional Wastewater Treatment Facility that arrives at our reuse plant where it is further purified, cleaned and tested to meet Florida's high-quality standards.

# Our connection process is simple and affordable.

## THERE ARE NO UPFRONT COSTS TO CONNECT TO OASIS!

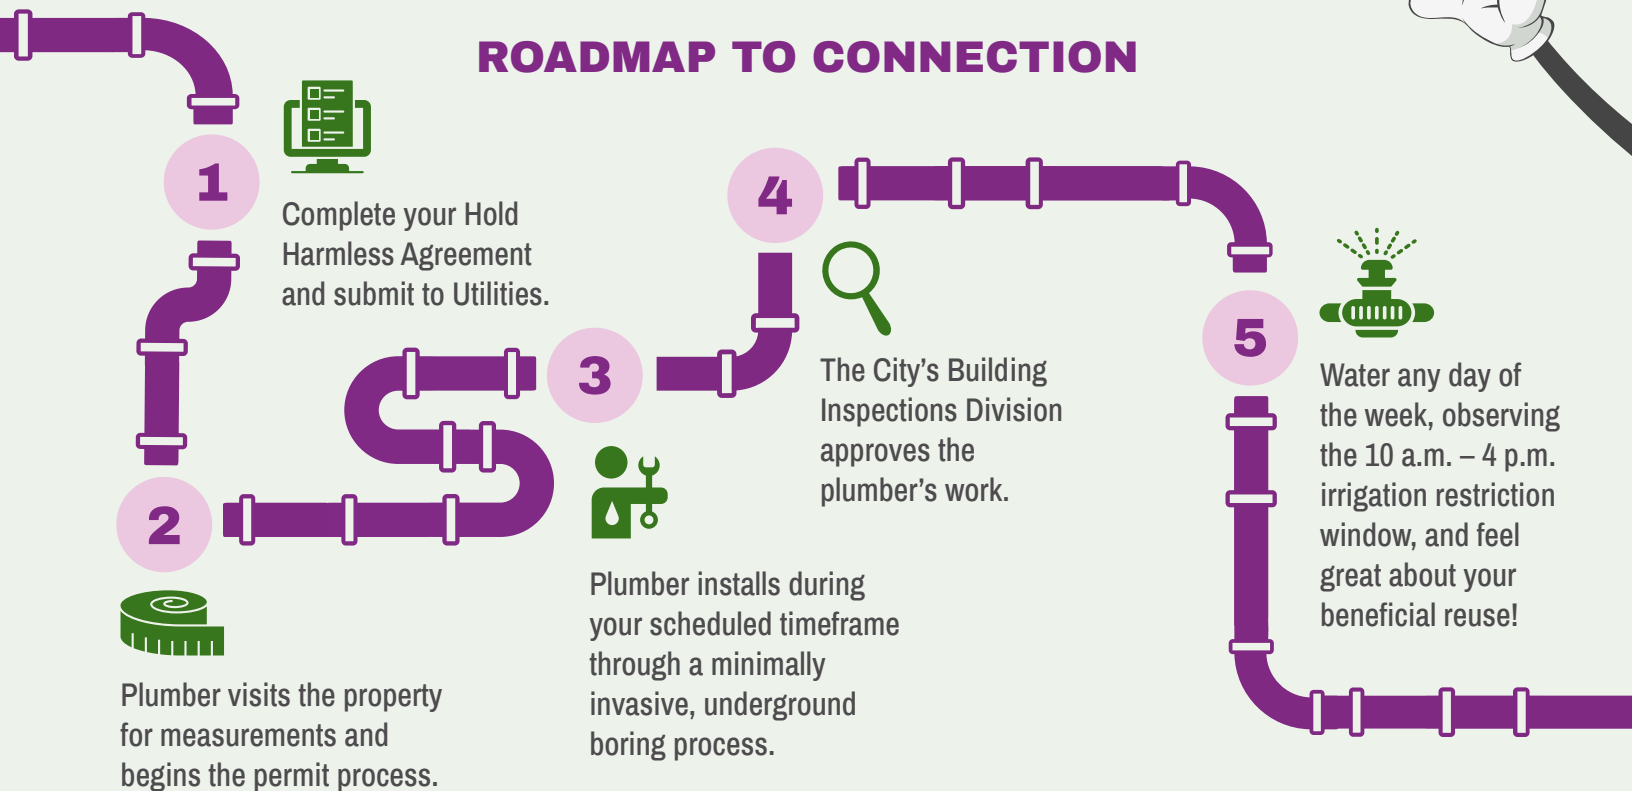

The City covers the cost of the connection for single family residential homes! And once you're connected, OASIS water costs less to use than drinking water, saving you money on your water bill.

## ONE FORM AND THE CITY DOES THE REST.

There is one simple form for homeowners to complete to connect to OASIS. After that, a licensed plumber will pull the permit and install your system. The City will inspect and approve your connection and you can now water any day of the week with reuse (except between 10 a.m. and 4 p.m.!).

## ROADMAP TO CONNECTION

### DID YOU KNOW?

OASIS water contains low levels of phosphorus and nitrogen, meaning you won't have to buy and apply as much fertilizer. That saves you time, money, and also protects our local waterways from excess pollutants.

*Conserving our drinking water is everyone's responsibility*
